

The mf develop within the mosquito for approximately 2 weeks. Once ingested by the mf:

4. Migrate to the thoracic muscles where they molt twice (L1-L3)

1. Pass to the stomach and exsheath into 1st larvae (L1)

2. Penetrate the gut wall

3. Enter the body cavity

5. Migrate to the head and mouthparts of the mosquito as infective larvae (L3)
