

STRUKTUR KAYU

DIMENSI BATANG TARIK

(pertemuan ke 3)

Ir. BESMAN SURBAKTI. MT

Semester B – 2011/2012

$$T_u = 34954,82 \text{ N (kombinasi 1)}$$

$$L = 3461,1 \text{ mm}$$

$$\lambda = 0,6$$

$$\phi_t = 0,8$$

Kode mutu E26

$$F_t // 60 \times 1,00 \times 0,8 \times 1,00 = 48 \text{ MPa (N/mm}^2\text{)}$$

$$T_u \leq \lambda \phi_t T'$$

T_u = gaya tarik terfaktor

λ = faktor waktu

ϕ_t = faktor tahanan tarik terkoreksi

T' = tahanan tarik terkoreksi

$$T' \geq \frac{T_u}{\lambda \phi_t}$$
$$\geq \frac{34954,82}{0,60 \times 0,80} = 64731,148 \text{ N}$$

$$T' = F_t \times A_n$$

$$A_n = \frac{64731,148}{48} = 1348,566 \text{ mm}^2$$

$$A = 1,33 A_n$$
$$= 1,33 \times 1348,566$$
$$= 1793,592$$

Ambil $b = 50,8$ (2")

$$h = \frac{A}{b} = \frac{1793,592}{50,8} = 35,30 \text{ mm}$$

maka ambil dimensi batang tarik 2" x 2" (50,8 mm x 50,8 mm)
